PROFILE

A front-end web developer of complex websites with over ten years' experience.

- Extensive familiarity with both proprietary and open source languages.
- Works to W3C standards.
- Experienced in meeting client requirements.
- Able to work with designers, other developers or solo as required.

KEY SKILLS

Primary: HTML, CSS, LESS, JavaScript (including ES2015), XML, XSL, XSL-FO
Secondary: .NET (C#), PHP, SQL

EMPLOYMENT HISTORY

Aurum
Front End Web Developer   2015 - 2016

- Rebuilt the company website, interacting with an external designer and various stakeholders within the company. The result was a modern website with a fresh look and feel built upon an open source CMS system.

- Helped plan and construct a prototype of a specialised marketing website using the Aurelia JavaScript framework for the CEO to use in business presentations and client meetings.

Morningstar
Senior Web Developer   2008 - 2015

- The only dedicated front end developer in a team of back end developers spread across Europe and Asia who build customisable tools that can be seen on the websites of various financial institutions as well as our in-house European retail websites.

- Responsible for re-architecting the real-time creation of the IWT team's factsheets. The newer versions have greater functionality, are more flexible and a smaller code footprint than their predecessors. As a result it is now quicker and easier for the implementation managers to customise them to fit client requirements - or for developers to add further functionality.

- Refactored, one module at a time, the CSS for the entire suite of modules that existed at that time whilst causing as little disruption as possible to existing clients. The result was a much reduced amount of CSS within the platform and made client customisation simpler.

- The go-to person for many colleagues when they require advice on whether something is possible or encounter an issue (whether front- or back-end) which they are struggling with.

- Ongoing responsibility for peer reviewing front end code (HTML, CSS, JavaScript and XSL) work produced by colleagues, training new team members on the factsheets, mentoring junior developers and assisting implementation managers with technical queries.
